

LR Dynamic Events: a positive debut in the Ligier European Series

Before the summer break, LR Dynamic Events reports on the first part of the racing season, analyzing the results obtained in the Ligier European Series 2022.

The competitive activity of the structure managed by Luca Riccitelli is positive: the debut in the international series organized by Ligier can be considered more than good, and the results are a confirmation of this. Right from the start of the Championship in Le Castellet, the team proved to be competitive. The drivers Simone Riccitelli and Nicola Neri were the undisputed protagonists, closing the weekend in second place in the general classification.

The two drivers of the Ligier JS P4 have shown their competitiveness, expressing the potential of the crew at each round, always collecting excellent results in qualifying, a clear example of what the team has achieved.

The agnostic rate of the Ligier European Series is in fact high and to all intents and purposes it is the gateway to the top class of motorsport endurance. Each event takes place within the context of the European Le Mans Series, or the FIA World Endurance Championship (in the case of the two races organized during the 24 Hours of Le Mans 2022).

During all the first part of the season, Nicola Neri and Simone Riccitelli showed their skills. In the race stage at the Circuit de la Sarthe, the start was a moment to be framed, with the car managed by LR Dynamic Events parading in front of everyone in the presence of the iconic "Totem Michelin". Emotions that were repeated also in the next round of Monza, with Simone Riccitelli protagonist of an incredible start, thanks to a masterpiece overtaking at the braking of the first corner.

Currently in sixth place of the Championship, LR Dynamic Events will work during this summer break to increase performance, thanks to the experience matured in the first part of the season, to be immediately competitive from the next race at SPA-Francorchamps.

The team manager Luca Riccitelli therefore presents a satisfactory rate picture, anticipating however a hard work in the month of August, precisely to respond to the high competitive level of the Ligier European Series: "I can certainly consider the first part of the season of the LR Dynamic Events positive. The level of the Championship is high, but, despite this, our drivers have always been competitive and protagonists every weekend. Every time we enter the track we gain more and more experience from the performance point of view, as demonstrated by the comebacks at Le Mans and Monza, two races in which bad luck played a certain role.

In addition to the sporting results, LR Dynamic Events, as Official Partner of Ligier Automotive in the Italian market, is promoting the creation of an Italian Series; "LR Dynamic Events is talking with organizers of the Italian Championships to create a Ligier series in our country. The goal is to create a chain of young drivers who, thanks to a preparatory championship, can refine their techniques in view of the international arrival in endurance contests ".

Simone Riccitelli "Up to now I can judge the progress of our championship as positive, the feeling with the car is growing with each race and we will use this summer break to improve the management of the car. I already had some great satisfactions, especially during the weekend at Le Mans, second position in qualy just one tenth from pole and the awesome start were really strong emotions. "

Nicola Neri "Considering our debut in the Ligier European Series, I am satisfied with our progress. There are so many emotions and racing in such a competitive Championship in the context of the ELMS and the WEC are unique experiences. Our race pace is always good and we will try to improve it again in the next race at SPA-Francorchamps".

To encourage young Italian talents and the interest of gentleman drivers in the endurance categories, LR Dynamic Events proposes the #LigierExperience program. Organized in the best Italian circuits, allows drivers to live a unique experience, followed by a racing engineer and a professional driver, you can analyze telemetry data and learn about the technical characteristics of the Ligier JS P4 and S2 R.
